Application of Python
Web Development
Game Development
ML and AI
Data Science and Data Visualization
Desktop GUI
Web Scraping
Automate daily tasks etc.

How to send email using Python

Requirements
Laptop/PC
Internet
Python
IDE (Sublime, Visual Studio, PyCharm etc.)
Email ID
Libraries: smtplib, getpass(optional)

Steps
1. Install and import libraries.
   (Open terminal or CMD)
   pip install smtplib
   pip install getpass
2. If you have Gmail ID then go to
   https://myaccount.google.com/lesssecureapps and turn it on.
3. Connect to SMTP Server.
4. Start TLS connection.
5. Login.
6. Send Mail.
7. Disconnect.

Source Code

```python
import smtplib
import getpass       #For security (Optional)

ob = smtplib.SMTP('smtp.zoho.com', 587)     #Connecting to SMTP server
(smtp.gmail.com)
ob.starttls()        #Starting TLS connection
```

```python
my_email = 'admin@digitalberi.com'      #Your email
password = getpass.getpass()            #For Security

ob.login(my_email,password)     #Login in to the SMTP Server

reciever_email = input('Enter Receiver Email: ')

subject = input('Enter Subject: ')

body = input('Enter Body: ')

message = f'Subject:{subject}\n\n{body}'

print('Sending email...')
ob.sendmail(my_email, reciever_email, message)      #Sending Email
print('Done.')

ob.quit()       #Disconnect

#Script by Dhiraj Beri.
```

Thank You!
Regards,
